

## **Job Profile for Full Stack Developer**

Responsible for developing and providing support for online (web and mobile) and digital self-service applications/platforms

### **Role Qualification:**

- **Academic/Professional:** A university degree in Computer Science, Mathematical Sciences, Electrical/Electronic Engineering, Computer Engineering or any other related course
- **Work experience:** Minimum of 6 years with cognate experience in web/mobile software application development and database management

### **Key Responsibilities:**

- Manage and develop web, mobile and other digital customer-facing platforms; ensure they are efficient and that they have end-to-end data integrity.
- Collaborate with relevant teams in terms of integration, to provide online access to internal business processes.
- Provide support to Internal customers by developing platforms that have reporting elements that can be used for data mining and analysis.
- Keep proper documentation of application set-up procedures; maintaining versions and updating of IT documentation (software implementation issues, plan deliverables and user manuals).
- Facilitate the Training of Users and development of training materials to bridge knowledge gaps
- Document and prepare periodic report on the events/activities, deliverables, issues and problems during IT project implementation.
- Perform routine health checks and monitors the performance of online and digital platforms.
- Provide support for digital platforms and liaise with internal teams to resolve related issues
- Collaborate with solution providers to ensure that application implementation is carried out in accordance with predefined standards and quality policies and in line with user requirements.
- Application testing and sending of status updates to the relevant Application Managers.
- Ensure availability of APIs and processes to facilitate development of digital solutions
- Integrate and manage different payment gateways
- Support third parties with integrations and connection to defined internal processes

### **Required Competencies**

- Experience working in an agile environment
- Experience building complex web systems that have been successfully delivered to customers
- Ability to take a project from scoping requirements through to actual launch of the project
- Experience in communicating with users, other technical teams and management to collect requirements, identify tasks, provide estimates and meet production deadlines
- Experience implementing and consuming large-scale web services (REST, SOAP, e.t.c.)

- Experience with professional software engineering best practices for the full software development life cycle, including coding standards, code reviews, source control management, build processes, testing and operations
- Eagerness and willingness to learn new technologies
- Proficiency in server-side programming/scripting languages (C#, VB.Net, ASP.NET, e.t.c.)
- Proficiency in database management (MSSQL, ORACLE, e.t.c.) and database query language (SQL)
- Good knowledge of Source Control (Team Foundation Server, GIT)
- Advance knowledge of web development (HTML5, CSS3, Javascript)

Interested Applicants should send their CVs to [recruitment.digital@axamansard.com](mailto:recruitment.digital@axamansard.com) stating the role applied for as subject of mail. i.e. "Full Stack Developer"
